2.4 Pumped liquid 泵送液体

UP, UPS pumps are suitable for pumping the following liquids:

- Clean, thin, non-aggressive and non-explosive liquids without solid particles or fibers
- In heating systems, the water should meet the requirements of accepted standards on water quality, for example the German standard VDI 2035-1
- Softened water: in domestic hot-water systems, the circulator pump should be used only for water with a degree of hardness lower than approximately 17°Dh.

根据水泵类型，UPS 循环水泵主要应用于如下液体：

- 洁净，低粘度，无腐蚀，非易爆液体，不含固体颗粒或纤维
- 在供暖系统中，水质应符合公认的供暖系统水质要求，如德标：VDI2035-1
- 软化水：在家用热水系统中，循环泵适用于水质硬度低于大约17°Dh的水。

2.5 Ambient and liquid temperature 环境与液体温度

Liquid temperature range 液体温度范围：-25°C—110°C

Ambient temperature range 环境温度范围：2°C—40°C, humidity 相对湿度<95%。

The pump is designed with double-coated winding and the stator housing has drain holes, it is suitable in colder water system which may create condense water inside the stator. 水泵电机线圈双层保护，定子外壳拥有排水孔可以排出可能产生的冷凝水。

2.6 Max working pressure and inlet pressure 最高系统压力和进口压力

Maximum working pressure 水泵最大工作压力：10 bar

To avoid cavitation noise and damage to the pump bearings, the following minimum pressures are required at the pump suction port:

为避免气蚀产生噪音和损坏水泵轴承，水泵的进口处需维持最小进口压力：

Liquid temperature 液体温度	$\leq 85^{\circ}\text{C}$	90°C	110°C
Min. inlet pressure 进口压力	0.5m head 0.049 bar	2.8m head 0.27 bar	11.0 m head 1.08 bar
